

Press Release 14/2026

Neustadt-Fernthal, June 2026

1. PLASTCOMPANY impresses with BOY innovations at Plastpol

This year's Plastpol in Kielce, which took place from 19 to 22 May, marked not only the trade fair's 30th anniversary but also the 10th anniversary of 1.PLASTCOMPANY. In Hall 3, Booth B03, the company presented forward-looking solutions from its long-standing partner BOY, which met with great interest from trade visitors.

Three machines were showcased at the booth, impressively demonstrating the innovative strength of the company and its partner BOY. The focus was initially on the BOY XS E, the most compact model in the series, which is regarded as a leader in the field of micro and small-part injection moulding.

In addition, two further machines were on display, both of which had made their debut the previous year. The BOY 20 E PRO, the successor to the BOY 22 A PRO, impressed with its energy-efficient servo drive, the modern Procan ALPHA[®] 4 control system and its extremely compact footprint of just 1.8 m².

The third highlight was the BOY 100 *Electric*, the largest model in the electromechanical series. It impressively demonstrated the advantages of electromechanical injection moulding technology: reduced cycle times through parallel movements, highly dynamic injection processes, high repeatability and precise motion sequences.

The industry is currently operating in an extremely challenging economic climate.

Despite this, this year's trade fair proved to be very productive and exceptionally valuable from a business perspective. The focus was on numerous technical discussions, including a significant number of new business contacts with customers specifically seeking comprehensive and modern technological solutions.

This once again demonstrated that, in particular, the ability to offer comprehensive support and a broad portfolio of solutions is a decisive factor for success in the current market environment.

“Despite the growing trend toward smaller local industry events, trade fairs still remain an essential platform for annual meetings with long-term customers, strengthening business relationships, and presenting new technologies. Further development of the plastics processing industry will only be possible through the commitment of the entire sector, as well as the ability of suppliers to adapt flexibly to the current economic environment” that is the conclusion reached by Przemysław Przybyła, Head of Machinery Division Poland.

1. PLASTCOMPANY is pleased with the outcome of the trade fair and would like to thank all trade visitors for their keen interest and the many constructive discussions.

Company profile

Dr. BOY GmbH & Co.KG is a leading global manufacturer of injection moulding machines with clamping forces up to 1,250 kN. These highly compact, durable machines operate with precision, are energy-efficient and therefore extremely economical. With its innovative concepts and solutions, BOY continues to prove itself as a trendsetter. Automation, digitalisation, sustainability and CO₂ reduction are particular areas of focus. Since the company was founded in 1968, over 55,000 injection moulding machines have been delivered to customers on every continent. The owner-managed company is consistently committed to engineering excellence and quality workmanship ‘Made in Germany’. For more information visit www.dr-boy.de
